Bed # 4

One Session = 22 Minutes

3,600 Watts of Power

This bed is for the individual who has not tanned or has a beginner tan; it produces a deep brown colour tan with no reddening at all and is intended for the tanner who does have the time for a long session.

36 Tube
100w Philips Performance Reflector **0.7% UVB**

Bed # 5

One Session = 10 Minutes

9,600 Watts of Power

This booth is intended for the individual who has an advanced tan; it produces a brownish red tan. Excellent for touching up an advanced tan i.e. white spots caused from pressure points on your back, arm pits, between your legs and the sides of your body.

60 Tube
160w Philips SWIFT VHO Reflector **3.0% UVB**

Remember indoor tanning lotions provide the proper moisturizers for your skin as Ultra violet light dries your skin and they also help the skin to be more ultra violet sensitive to accelerate the tanning process. Tans last longer and tan faster with moist skin and require less tanning sessions to keep your colour, dry skin causes your tan to fade fast through the body's natural exfoliation process.

The slower you build your tan, the longer it will last, quick tans fade fast.

We recommend that you take your time and alternate between our different beds to give you a natural looking tan.

*** For Insurance & Health Reasons Protective Eye Wear Must Be Worn While Tanning.**

*** Don't Forget Your Eye Wear, As We Don't Loan Them Because We Have No Way To Clean Goggles Properly.**

*** Only Use Approved Indoor Tanning Lotions, Other Lotions & Oils Will Damage the Tanning Bed's Acrylics.**

*** GOLDEN RULE OF TANNING NEVER SUNBURN ***

Planning on going south for a holiday, buy a 10 pack and start tanning 30 days before you plan to leave for holidays. Your skin needs the time to change its colour.

Sunburns do not / can not turn into tans, a tan cannot be rushed.

Always use sunscreens outdoors even if you have a tan, even tanned skin can burn.
